Table of Contents:

Section I - Cognition and Higher Cerebral Function

1. Neurocognitive development of visuocognitive motor behavior revealed by event-related potentials in cued continuous performance test (S. Okazaki and H. Ozaki)

2. Studying higher cerebral functions by transcranial magnetic stimulation (Y. Terao and Y. Ugawa)

4. Cortical activities elicited by viewing mouth movements: a magnetoencephalographic study (K. Miki, S. Watanabe, R. Kakigi and A. Puce)

5. Optimal methods of stimulus presentation and frequency analysis in P300-based brain computer interfaces for patients with severe motor impairment (R. Neshige, N. Murayama, K. Tanoue, H. Kurokawa and T. Igasaki)

8. High frequency oscillatory activities during selective attention in humans (I. Ozaki, Y. Yaegashi, M. Baba and I. Hashimoto)

9. Event-related components of laser evoked potentials (LEPs) in pain stimulation: recognition of infrequency, location and intensity of pain (M. Kanda)

10. Novelty-related brain response and its clinical applications (S. Yamaguchi)

11. Cross-modal plasticity in the blind revealed using functional neuroimaging (N. Sadato)

12. Psychophysics and electrophysiology of human perceptual learning: a summary (W. Skrandies)

13. Two ways of hearing – dissociation between spectral and temporal processes in the auditory cortex (S.J. Jones)
14. The mystery of photopsias, visual hallucinations and distortions (G.G. Celesia)

Section II - Sources and Origins

15. Intraoperative neurophysiology of the corticospinal tract of the spinal cord (V. Deletis)

16. Generators of subcortical components of SEPs and their clinical applications (M. Sonoo)

17. Intraoperative recording of the very fast oscillatory activities evoked by median nerve stimulation in the human thalamus (R. Hanajima, R. Chen, P. Ashby, A.M. Lozano, W.D. Hutchison, K.D. Davis and J.O. Dostrovsky)

20. High-frequency oscillations in the human motor system (T. Uozumi, A. Tamagawa, T. Hashimoto and S. Tsuji)

21. Functional changes in cortical components of somatosensory evoked responses by stimulus repetition (M. Hoshiyama and R. Kakigi)

22. Origins and characteristics of high frequency (>500 Hz) SEP components directly recorded from the cervical cord, thalamus and cerebral cortex (E. Urasaki, R. Maeda, N. Akamatsu and A. Yokota)

23. The nature of facilitation of motor evoked potentials by heteronymous muscle contraction in the lower limb - Interactions between knee and ankle muscles (S.-I. Izumi)

24. Repetitive transcranial magnetic stimulation (rTMS) in monkeys (Y. Ugawa, S. Okabe, T. Hayashi, T. Ohnishi and Y. Nonaka)

26. Functional mapping in epilepsy patients’ information
from subdural electrodes (R.P. Lesser)

27. Are the processes reflected by late and ultra-late laser-evoked potentials specific of nociception? (A. Mouraux and L. Plaghki)

28. Interaction of somatosensory evoked potentials within the same nerve and between the two different nerves: including high frequency oscillation (HFO) (T. Yamada, Y. Azuma and T. Yanagisawa)

29. Comparison between preoperative and intraoperative localization of cortical function in patients with brain tumors (J.P. Mäkelä)

30. Insights into the functional organization of limbic cortical circuits from studies of evoked potentials and spontaneous activity (M. Stewart)

31. Application of dipole models in exploring somatosensory evoked potential sources (M. Valeriani and D. Le Pera)

Section III - Clinical Advances

33. Electrophysiological assessment of pain (L. Arendt-Nielsen and O.K. Andersen)

34. Multimodal evoked potentials in patients with pediatric leukodystrophy (M. Inagaki, Y. Kaga, M. Kaga and K. Nihei)

36. Immune-mediated potassium channelopathies (K. Arimura, A.R. Ng and O. Watanabe)

37. Abnormal sensorimotor integration in hand dystonia (N. Murase, H. Shimadu, R. Urushihara and R. Kaji)

38. Neurophysiologic studies in Krabbe disease (A.M. Husain)

39. Current understanding of F-wave physiology in the clinical domain (J. Kimura)

40. What is the evidence justifying non-invasive SEP and
MEP monitoring during spinal surgery? (S.J. Jones)

41. Role of clinical neurophysiology in the diagnosis and management of visual disorders (G.G. Celesia)

42. Peripheral recovery and central response following toe-to-finger transplantation (N.-S. Chu and F.-C. Wei)

43. Some controversies in carpal tunnel syndrome (S.H. Jung and T.R. Han)
