Table Of Contents:
Section 1 Pathogenesis
1. Immune regulation of multiple sclerosis
2. Neuropathology of MS
3. The good and the bad of neuroinflammation in multiple sclerosis
4. Demyelination in multiple sclerosis
5. Axonal Loss in Multiple Sclerosis: Causes and Mechanisms
6. Insights from magnetic resonance imaging
7. Infections and multiple sclerosis
8. The experimental autoimmune encephalomyelitis (EAE) model of MS: utility for understanding disease pathophysiology and treatment

Section 2 Epidemiology and genetics
9. Multiple sclerosis genetics
10. Genetics of primary progressive multiple sclerosis
11. The epidemiology of multiple sclerosis: insights to disease pathogenesis

Section 3 Diagnosis and disease course
12. Multiple Sclerosis: Diagnosis, Differential Diagnosis and Clinical Presentation
13. MRI mimics of multiple sclerosis
14. Diagnosis of multiple sclerosis
15. Clinical course of multiple sclerosis
16. Early prognosis of multiple sclerosis
17. Clinical outcome measures in Multiple Sclerosis
18. MRI outcomes in the diagnosis and disease course of multiple sclerosis
19. Multiple sclerosis in children

Section 4 Treatment
20. Clinical trials in multiple sclerosis
22. Disease Modifying Agents in Multiple Sclerosis
23. Immunosuppressive treatments in multiple sclerosis
24. Symptomatic treatment and management of multiple sclerosis
25. Future Treatment Approaches to multiple sclerosis

Section 5 Other demyelinating diseases
26. Neuromyelitis Optica (Devic's Syndrome)
27. Acute disseminated encephalomyelitis and other inflammatory demyelinating variants
28. Acute inflammatory myelopathies

Section 6 Capita selecta
29. Clinical Neurophysiology of multiple sclerosis
30. Cerebrospinal fluid analysis
