	Preface	
	The way things were: the discovery of experimental 'allergic' neuritis	
1	Immune interactions in the peripheral nervous system	1
2	Epidemiology of autoimmune polyneuropathies	29
3	Immune-mediated experimental neuropathies	36
4	Clinical evaluation and differential diagnosis	55
5	Electrophysiological studies	73
6	Immunopathological studies in immune-mediated neuropathies	81
7	Guillain-Barre syndrome and variants	99
8	Chronic inflammatory demyelinating polyneuropathy	111
9	Acute and chronic sensory neuronopathy	126
10	Acute and chronic autonomic neuropathies	138
11	Vasculitic neuropathies	158
12	Neuropathies associated with anti-MAG antibodies and IgM monoclonal gammopathies	168
13	Motor neuropathies associated with anti-GM1 ganglioside antibodies	190
14	Neuropathies associated with anti-sulfatide and other glycoconjugate antibodies	201
15	Paraneoplastic peripheral neuropathy	208
16	Polyneuropathies associated with myeloma, POFMS, and non-malignant IgG and IgA monoclonal gammopathies	225
17	Neuromyotonia and the Lambert-Eaton myasthenic syndrome	238
18	Toxin- and drug-induced immune neuropathies	251
19	The post-polio syndrome	269
20	Peripheral neuropathy in HIV-1 infection	285
21	Lyme neuropathy	308
22	Neuropathy in leprosy	319
23	Neuropathies associated with herpes virus infections	340
24	Immunosuppression and immunomodulation	357
25	Management of paralytic neuropathy in the intensive care unit	377
26	Diagnosis and symptomatic therapy of nerve pain	389
27	Medical rehabilitation	415
	Index	426
