

Table of Contents

	Prologue : the clinical transition from intracranial to extracranial stereotactic radiation therapy	1
Sect. I	The radiobiology of stereotactic body radiation therapy (SBRT)	7
1	Estimation of required doses in stereotactic body radiation therapy	7
2	The cellular signaling response to radiation	15
3	Radiation effects and the role of cytokines : mechanisms and potential clinical implications	19
4	Normal tissue dose constraints applied in lung stereotactic body radiation therapy	29
5	Normal tissue dose constraints in stereotactic body radiation therapy for liver tumors	39
6	Special problems in stereotactic body radiation therapy : dose rate effect, dose inhomogeneity, and target margin selection	47
Sect. II	The physics and dosimetry of stereotactic body radiation therapy	51
7	Immobilization, localization, and repositioning methods in stereotactic body radiation therapy	51
8	Dosimetry of stereotactic body radiation therapy	57
9	Quality assurance in stereotactic body radiation therapy	69
Sect. III	Initiating and building a clinical stereotactic body radiation therapy program	79
10	Clinical operational issues : optimizing the treatment process	79
11	Commissioning and accreditation of a stereotactic body radiation therapy program	85
12	Personnel training for stereotactic body radiation therapy	95
13	Stereotactic body radiation therapy for lung tumors	99
	Case studies in lung SBRT : application of the FOCAL unit	108
	Case study in lung SBRT : the Indiana University phase II protocol for medically	110

	inoperable lung cancer	
	Case study in lung SBRT : long-term follow-up in a patient with a history of tuberculosis	
14	Stereotactic body radiation therapy for liver tumors	115
	Case study in liver SBRT : dose optimization via inverse treatment planning	125
15	Stereotactic body radiation therapy for renal cell carcinoma	129
16	Stereotactic body radiation therapy for retroperitoneal and pelvic tumors	135
	Case study in prostate SBRT : the SHARP protocol	140
17	Stereotactic body radiation therapy for paraspinal tumors	143
	Case study of spinal SBRT : radiosurgery for vertebral metastasis	150
