

Table of Contents

Chapter 1: Production of Radionuclides for PET

Chapter 2: Radiotracer Chemistry

Chapter 3: PET Physics and PET Instrumentation

Chapter 4: Fundamentals of CT in PET/CT

Chapter 5: Data Analysis and Image Processing

Chapter 6: Standardized Uptake Values

Chapter 7: Image Fusion

Chapter 8: Oncologic Applications

- Principles of Cancer Imaging with FDG PET/CT
- How to Optimize CT for PET/CT
- Artifacts and Normal Variants in PET
- Monitoring Response to Treatment
- PET and PET/CT in Radiation Oncology
- Central Nervous System
- Use of PET and PET/CT in the Evaluation of Patients with Head and Neck Cancer
- Thyroid Cancer and Thyroid Imaging
- Lung Cancer
- Lymphoma and Myeloma
- PET and PET/CT of Malignant Melanoma
- PET in Breast Cancers
- Esophagus
- Applications for Fluorodeoxyglucose PET and PET/CT in the Evaluation of Patients with Colorectal Carcinoma
- Pancreatic and Hepatobiliary Cancers
- Cervical and Uterine Cancer
- PET and PET/CT in Ovarian Cancer
- Genitourinary Malignancies
- Sarcomas
- Gastrointestinal Stromal Tumors
- PET and PET/CT Imaging of Neuroendocrine Tumors
- Carcinoma of Unknown Primary: Including Paraneoplastic Neurological Syndromes
- Pediatrics
- Hypoxia Imaging
- Newer Tracers for Cancer Imaging

Chapter 9: Neurologic Applications

- Movement Disorders, Stroke and Epilepsy

- Fluorodeoxyglucose PET Imaging of Dementia: Principles and Clinical Applications

Chapter 10: Psychiatric Disorders

Chapter 11: Cardiac Applications

- Evaluation of Myocardial Perfusion
- Myocardial Viability
- Oxidative Metabolism and Cardiac Efficiency
- Myocardial Neurotransmitter Imaging

Chapter 12: PET/CT Imaging of Infection and Inflammation

Chapter 13: PET and Drug Development

Chapter 14: Emerging Opportunities

- Imaging Gene Expression
- The Kidneys
- Imaging the Neovasculature
- Progress in Amyloid Imaging: Five Years of Progress

Chapter 15: PET Imaging as a Biomarker

Index
