

Table of Contents

1 Toward Automated Breast Histopathology Using Mid-IR Spectroscopic Imaging R. Bhargava Bhargava, R. 1

1.1 Introduction 2

1.1.1 FT-IR Imaging 4

1.1.2 FT-IR Spectroscopic Characterization of Cells and Tissues 5

1.1.3 FT-IR Imaging for Pathology 6

1.1.4 High-Throughput Sampling 8

1.1.5 Modified Bayesian Classification and Automated Tissue Histopathology 8

1.2 Materials and Methods 10

1.2.1 Models for Spectral Recognition and Analysis of Class Data 11

1.2.2 Automated Metric Selection and Classification Protocol Optimization 12

1.2.3 Spectral Metrics and Biochemical Basis 14

1.2.4 Validation and Dependence on Experimental Parameters 15

1.2.5 Application for Cancer Pixel Segmentation 18

1.2.6 Application for Patient Cancer Segmentation 21

1.3 Conclusions 25

References 26

2 Synchrotron-Based FTIR Spectromicroscopy and Imaging of Single Algal Cells and Cartilage Carol J. Hirschmugl Hirschmugl, Carol J. 29

2.1 Introduction 30

2.2 IR Environmental Imaging 31

2.2.1 Beamline Design and Implementation 32

2.2.2 Initial Measurements with IRENI 35

2.3 Flow Cell for In Vivo IR Microspectroscopy of Biological Samples 36

2.3.1 Flow Chamber Design 39

2.3.2 Mid-IR and Vis Measurements 42

2.3.3 Viability Tests: PAM Fluorescence Measurements	44
2.3.4 Initial Flow Cell Measurements with IRENI	47
2.4 Biomedical Application: Calcium-Containing Crystals in Arthritic Cartilage	48
2.4.1 Calcium-Containing Crystals and Arthritis	48
2.4.2 Current Methods of Crystal Identification	49
2.4.3 Biologic Models of Calcium-Containing Crystal Formation	49
2.4.4 Synchrotron-Based FTIR Microspectroscopy Spectral Analysis of Calcium-Containing Crystals	50
2.5 Future Directions: In Vivo Kinetics of Pathological Mineralization and Phytoplankton Adaptation	55
Acknowledgments	55
References	56
3 Preparation of Tissues and Cells for Infrared and Raman Spectroscopy and Imaging	Peter Gardner Gardner, Peter 59
3.1 Introduction	59
3.2 Tissue Preparation	61
3.2.1 Archived Tissue: Paraffin Embedded and Frozen Specimens	61
3.2.2 Preparation of Tissues for Diagnostic Assessment Using FTIR and Raman Microspectroscopy	63
3.2.3 The Effects of Xylene on fixed Tissue and Deparaffinization of Paraffin-embedded Tissue	68
3.3 Cell Preparation	71
3.3.1 Chemical Fixation for FTIR and Raman Imaging	71
3.3.2 Sample Preparation for Biomechanistic Studies	78
3.3.3 Growth Medium and Substrate Effects on Spectroscopic Examination of Cells	80
3.3.4 Preparation of Living Cells for FTIR and Raman Studies	85
3.4 Summary	92

Acknowledgments 94

5 sFTIR, Raman, and SERS Imaging of Fungal Cells Susan G. W. Kaminskyi
Kaminskyi, Susan G. W. 125

5.1 Introduction 125

5.2 Introduction to Fungi 127

5.2.1 Specimen Preparation 129

5.3 Vibrational Spectroscopy 130

5.3.1 Spectral Resolution 132

5.3.2 Spatial Resolution 133

5.4 sFTIR Spectra of Fungi 133

5.4.1 Physical Considerations and Spectral Anomalies in sFTIR Spectra 134

5.5 Raman Spectroscopy of Fungi 137

5.5.1 Raman Map From a Hyphe, at Growing Tip 139

5.5.2 Raman Map of Spore Branch 139

5.5.3 Detection of Crystalline Meaterials by IR and Raman 140

5.6 SERS Discovery and Development	142
5.6.1 Substrates: The Key to SERS Imaging	145
5.6.2 SERS: Applications for Fungi	145
5.7 Conclusions: Lessons Learned, Caveats, Challenges, Promise	150

6.1 Introduction	157
6.2 Generation of Raman Images	158
6.2.1 Point Mapping	158
6.2.2 Line Mapping	158
6.2.3 Other Modes of Generating Raman Images	159
6.2.4 Widefield Imaging	159
6.3 Raman Imaging of Cells and Tissues	161
6.4 Background and Image Preprocessing Steps for Widefield Raman Images	164
6.4.1 Fluorescence	164
6.4.2 Correction for Dark Current	166
6.4.3 Cosmic Filtering	166
6.4.4 Instrument Response Correction	166
6.4.5 Flatfielding	167
6.4.6 Baseline Correction	168
6.4.7 Normalization	170
6.4.8 Smoothing	170
6.5 Chemometric Analysis of Widefield Raman Images	170
6.5.1 Principal Component Analysis	171

6.5.2 Mahalanobis and Euclidean Distance 173

6.5.3 Spectral Mixture Resolution 178

6.5.4 Derivatives 179

6.6 Chemometrics in the Analysis of Non-Widefield Raman Images 180

6.6.1 PCA 181

6.6.2 Linear Discriminant Analysis 184

6.7 Conclusions 187
