

## **Table of Contents:**

Introduction

Acknowledgements

Part 1 Terrorism in Perspective - don't panic!

Terrorism today

Key events in terrorism (including significant anniversaries)

Key terrorist groups and affiliations

Personal safety

Personal protection

Quarantine

Roles and organisation of the antiterrorist agencies

UK

International

Service rank markings (UK)

Useful addresses and contact details

Legal aspects

New legislation

Recognising the suspicious person

Part 2 Responding to a terrorist incident

Reasons for declaring an incident

Initial actions checklist

Declaring a major incident

Organisation of an incident scene

Triage

Agency roles at an incident

Health Service

Fire

Police

Ambulance

Bomb disposal

Nuclear agencies

Medical response to an incident scene

Legal aspects

Forensic aspects

The scene

The patients

Dealing with the media

Debriefing

Part 3 Conventional terrorism

Types of terrorist weapon

Bombs (fire bombs, pipe bombs, suicide bombs etc)

Bullets (high energy, low energy, expanding)

Pathophysiology of wounding

Blast

Ballistics

Initial management

Safety

Resuscitation

Injury patterns in bombings

Primary blast  
Fragmentation  
Amputations / disruption  
Burns  
Crush  
Psychological  
Presentation, management, strategy.  
Forensic management

#### Section 4 Bioterrorism

The nature of a suspected bioterrorist outbreak  
How to suspect a deliberate release  
Physical features of deliberate release  
Diagnostic symptom complexes  
What to do about it  
Handling a "white powder" incident  
Who to contact for further assistance  
What to tell the public (before and after the release is confirmed)  
Possible agents (presentation, incubation, management etc)  
Anthrax  
Smallpox  
Plague  
Botulinum  
Tularaemia  
Haemorrhagic fever viruses  
Pre-exposure prophylaxis  
Post-exposure prophylaxis

#### Section 5 Chemical agents

The nature of a suspected chemical attack  
How to suspect a deliberate release of chemicals  
Useful symptom complexes for agent recognition  
What to do about it  
Who to contact for further assistance  
What to tell the public - suggestions for first aid  
Protective equipment  
Personal protective equipment  
Collective protection  
Possible agents  
Nerve agents  
Vesicants  
Blood agents  
Choking agents  
Incapacitating agents  
Smokes  
Other toxins  
Initial management (Specific management is covered under each agent)  
Safety  
Resuscitation  
Decontamination

Specific antidotes  
Rescuer safety  
Contamination

## Section 6 Nuclear and radiation hazards

The nature of nuclear terrorism  
Types of radiation  
Sources of radioactive substances  
The "dirty bomb"  
Radiation protection  
Pathophysiology of radiation damage  
Presentation of radiation injury  
Initial response to a radioactive leak  
Initial management of casualties  
Safety  
Decontamination  
Resuscitation  
Sources of information  
Prognosis in radiation injury

## Section 7 Medicine and Civil disorder

How crowds behave  
How the police handle a crowd  
Role of the other emergency services  
Keeping safe  
Them:  
Improvised weapons  
Us:  
Less lethal weapons  
CS gas  
Water cannon  
Baton rounds  
Tasers  
Initial treatment on scene
