

Table of Contents

I. Anatomy and Pathophysiology of Blinking and Eye Movements Eyelid anatomy and the pathophysiology of blinking Differentiation and morphogenesis of extraocular muscles Extraocular muscle anatomy Extraocular muscle metabolism Extraocular muscles: proprioception and proprioceptors Abnormal eye movements due to disease of the extraocular muscles and their innervation Extraocular muscles: functional assessment in the clinic

II. Structure and Function of the Tear Film, Ocular Adnexa, Cornea, and Conjunctiva in Health and Pathogenesis in Disease Meibomian glands and lipid layer Lacrimal gland overview Lacrimal gland hormone regulation Lacrimal gland signaling-neural Lids: Anatomy, pathophysiology, and mucocutaneous junction Ocular surface-overview of electrolyte and fluid transport across the conjunctiva Conjunctival Goblet cells Ocular mucins Tear drainage Cornea overview Corneal epithelium-cell biology and basic science Corneal nerves-anatomy Corneal nerves-function Corneal epithelium-wound healing junctions, attachment to stroma receptors, matrix metalloproteinases, intercellular communications Corneal epithelium-transport and permeability Stem cells of the ocular surface The ocular surface-the surgical treatment for corneal epithelial stem cell deficiency, corneal epithelial defects, and peripheral corneal ulcer Refractive surgery Refractive surgery and inlays Contact lenses Imaging of the cornea The corneal stroma Corneal dystrophies Corneal imaging-clinical Corneal scars Corneal endothelium-overview Regulation of corneal endothelial function Regulation of corneal endothelial cell proliferation Artificial cornea Drug delivery to cornea and conjunctiva-esterase- and protease-directed prodrug design Knock-out mice models: cornea, conjunctiva, eyelids, and lacrimal glands Gene therapy

III. Immune Regulation of the Cornea and Conjunctiva and Its Dysregulation in Disease Adaptive Immune System and the Eye: Mucosal Immunity Adaptive immune system and the eye: T-cell mediated immunity Innate immune system and the eye Immunoregulatory processes that sustain immune privilege in the eye Immunosuppressive and anti-inflammatory molecules that maintain immune privilege of the eye Antigen-presenting cells in the eye and ocular surface Dry eye: An immune-based inflammation Penetrating keratoplasty Immunopathogenesis of HSV Keratitis Immunopathogenesis of Onchocerciasis (River Blindness) Immunopathogenesis of pseudomonas keratitis Immunobiology of acanthamoeba keratitis Molecular and cellular mechanisms in allergic conjunctivitis Pathogenesis of fungal keratitis Conjunctiva Immune surveillance Defense mechanisms of tears and ocular surface Corneal epithelium- response to infection Inflammation of the Conjunctiva Concept of Angiogenic Privilege Corneal angiogenesis Avascularity of the cornea

IV. Visual Acuity Related to the Cornea and Its Disorders Visual optics: pupil Acuity Contrast sensitivity Astigmatism Vera-Diaz- Myopia Levi-Amblyopia Harb- Hyperopia
