Table of Contents:
1 Antibiotic Stewardship: Hospital Strategies to Curb Antibiotic Resistance
2 Mechanisms of antibacterial resistance: shedding some light over these obscure processes?
3 Signaling pathways sustaining antibiotic resistance
4 Emerging drug resistance in bacterial enteric pathogens
5 Carbapenem resistant gram-negative bacilli
6 Antibiotic resistance: Can nanoparticles tackle the problem?
7 Nanoarhitectonics used in anti-infective therapy
8 Nanobiocomposites of metals as antimicrobial agents
9 Nano/nitric oxide and antibiotic resistance
10 Controlling bacterial antibiotic resistance using plant-derived compounds
11 Essential oils: A natural alternative to antibiotics resistance
12 Essential oil sensitivity of ESBL-producing Gram-negative bacteria
13 Antimicrobial and antibiotic potentiating activity of essential oils from tropical medicinal herbs and spices
14 Antimicrobial natural products against bacterial biofilms
15 The potential use of bacteriophage therapy as a treatment option in a post antibiotic era
16 Bacteriocins and its use for multidrug resistance bacterial control
17 Marine natural products in fighting microbial infections
18 Algae as a novel source of antimicrobial compounds: current and future perspectives
