Table of Contents

**General introduction to paediatric intensive care**
1: An introduction to paediatric intensive care  
2: Epidemiology and outcome of paediatric intensive care  
3: Paediatric resuscitation and critical care outreach  
4: Clinical assessment  
5: Physics and clinical measurement  
6: Vascular access and monitoring  
7: Applied physiology

**Organ system support and related practical procedures**
8: Airway management and ventilation  
9: Anaesthesia  
10: Analgesia and sedation  
11: Circulatory support  
12: Cardiopulmonary bypass  
13: Managing fluids and electrolytes/acid base  
14: Renal replacement therapies  
15: Nutrition  
16: Heat-related illness  
17: Prescribing  
18: Transport and retrieval  
19: Imaging in paediatric intensive care

**Specific specialties**
20: Cardiac disorders and post-operative care  
21: Respiratory disease  
22: Neurocritical care  
23: Trauma  
24: Infection control policies and PICU  
25: Immunity and infection  
26: Sepsis and multiple organ failure  
27: Laboratory investigations for infectious disease  
28: Antimicrobial use on the PICU  
29: Neonatology  
30: Gastroenterology and hepatology  
31: Nephrology  
32: Diabetes and endocrinology  
33: Metabolic  
34: Haematology and oncology  
35: Brain death, organ donation, and transplantation  
36: Poisoning  
37: Technology dependent children  
38: Genetic syndromes  
39: Paediatric intensive care medicine in the developing world

**Compassionate and family-orientated care**
40: The child and family in PICU  
41: Aspects of the law in paediatric intensive care  
42: Clinical governance, audit and risk management  
43: Child protection
