

Table of contents

- 1: Introduction
- 2: General principles of medical genetics
- 3: Genetic laboratory techniques
- 4: Genetic counselling
- 5: Genetic testing and genetic screening
- 6: Congenital heart disease
- 7: Cardiovascular manifestations in chromosomal disorders
- 8: Cardiomyopathies
- 9: Inherited arrhythmias and conduction disorders
- 10: Inherited disorders of connective tissue
- 11: Familial hypercholesterolaemia
- 12: Coronary artery disease and myocardial infarction
- 13: Stroke
- 14: Pulmonary arterial hypertension
- 15: Hereditary Haemorrhagic Telangiectasia (HHT)
- 16: Cardiac manifestations in inherited skeletal muscle disease
- 17: Mitochondrial disease
- 18: Cardiovascular disorders and inherited metabolic disease
- 19: The heart and inherited haematological disorders
- 20: Therapeutic approaches in cardiovascular genetics
