

## Table of Contents

1. History of ophthalmic anaesthesia
2. Anatomical considerations
3. Ocular physiology relevant to ophthalmic anaesthesia
4. Pharmacology for ophthalmic anaesthesia
5. Pre-operative assessment and preparation
6. Needle based orbital regional anaesthesia for adult ophthalmic surgery
7. Cannula based sub-Tenon's block for adult ophthalmic surgery
8. Ophthalmic topical anaesthesia
9. Monitored sedation for ophthalmic surgery
10. Anaesthesia for oculoplastic surgical procedures
11. General anaesthesia for adult ophthalmic surgery
12. Anaesthetic considerations in the elderly
13. Anaesthesia for paediatric ophthalmic surgery
14. Anaesthesia for glaucoma surgery
15. Anaesthesia for vitreo-retinal (VR) surgery
16. Anaesthesia for adult strabismus surgery
17. Anaesthesia for adult corneal transplant surgery
18. Anaesthesia for tumour surgery
19. Anaesthesia for ocular trauma
20. Retained visual sensations during ophthalmic surgery under regional anaesthesia
21. Complications of ophthalmic regional anaesthesia
22. Patient positioning for eye surgery
23. Post-operative management
24. Future developments
