

Table of Contents:

Section 1: General principles

1. Molecular structure and biochemistry
2. Biology of the cell
3. Cell signaling
4. Principles and techniques of molecular biology
5. Genomics and proteomics
6. Molecular physiology
7. Sites of drug action
8. Pharmacokinetic principles
9. Anesthetic drug interactions
10. Adverse drug reactions
11. Basic physical principles
12. Electromagnetism, light and radiation
13. Electrocardiography
14. Electrophysiological monitoring
15. Basic principles and limitations of hemodynamic monitoring
16. Monitoring of gas concentrations
17. Ultrasonography
18. Statistics

Section 2: Neurosciences

19. The structure and function of neurons
20. The synapse
21. Neurophysiology
22. Sensory systems
23. Physiology of pain
24. General anesthetics: mechanisms of action
25. Intravenous anesthetic agents
26. Inhalational anesthetic agents
27. Pharmacokinetics of inhalation anesthetics
28. Anesthetic adjuvants and other CNS drugs
29. Consciousness and cognition
30. Sleep and anesthesia
31. Opioids
32. Nonopioid analgesic and anti-inflammatory drugs
33. Pharmacology of local anesthetics
34. Autonomic nervous system

Section 3: Muscle

35. Voluntary motor systems—skeletal muscle, reflexes, and control of movement
36. Neuromuscular junction physiology
37. Neuromuscular junction pharmacology
38. Vascular smooth muscle

Section 4: Cardiovascular system

39. Cardiac physiology
40. Cardiac electrophysiology
41. Cardiovascular pharmacology
42. Regulation and assessment of cardiac function
43. The peripheral circulation
44. Ischemic heart disease and heart failure
45. Valvular heart disease

Section 5: Respiratory system

46. Regulation of respiration
47. Ventilation and perfusion
48. Gas exchange
49. Respiratory mechanics
50. Lung function testing
51. Drugs affecting the respiratory system

Section 6: Pathological sciences

52. Blood constituents and transfusion
53. Homeostasis and coagulation
54. The immune system
55. Microbiology
56. Ischemia

Section 7: Renal system

57. Renal physiology
58. Renal pathophysiology
59. Regulation of blood volume and electrolytes
60. Acid-base homeostasis

Section 8: Gastrointestinal system and metabolism

61. Gut motility and secretions
62. Nutrition, digestion and absorption
63. Physiology and pharmacology of nausea and vomiting
64. Physiology and pharmacology of the liver
65. Regulation of intermediary metabolism
66. Endocrinology
67. Thermoregulation

Section 9: Adaptive physiology

68. Pregnancy
69. Geriatrics
70. Neonatology
71. The pathophysiology of obesity and its implications for anesthesia
72. Physiological response to surgery
73. Sepsis
