Table of Contents:
Section I - Genetics and Embryology
  1. Basic Genetic Principles
  2. Prenatal Diagnosis
  3. Basic Embryology
  4. Regulation of Embryogenesis
  5. The Extracellular Matrix in Development
  6. Stem Cell Biology
  7. Apoptotic Cell Death
  8. Angiogenesis
  9. Epigenetics

Section II - Placenta and Intrauterine Environment
  10. Placental Development
  11. Regulation of the Placental Circulation
  12. Mechanisms of Transfer Across the Human Placenta
  13. Endocrine and Paracrine Function of the Human Placenta
  14. Fetal and Maternal Responses to Intrauterine Infection
  15. Fetal Origins of Adult Disease: A Classic Hypothesis with New Relevance
  16. Physiologic Effects of Multiple Pregnancy on Mother and Fetus
  17. Placental function in intrauterine growth restriction

Section III - Developmental Pharmacology and Pharmacokinetics
  18. Basic Pharmacologic Principles
  19. Principles of Pharmacokinetics
  20. Physicochemical and Structural Properties Regulating Placental Drug Transfer
  21. Pharmacogenetics
  22. Drug Distribution in Fetal Life
  23. Drug Transfer During Breastfeeding

Section IV - Intrauterine and Postnatal Growth
  24. Circulatory and Metabolic Changes Accompanying Fetal Growth Restriction
  25. Endocrine Factors Affecting Neonatal Growth
26. Human Milk Composition and Function in the Infant

27. Physiology of Lactation

   **Section V - Perinatal Iron, Mineral, and Vitamin Metabolism**

28. Fetal and Neonatal Iron Metabolism

29. Neonatal Calcium, Phosphorus, and Magnesium Homeostasis

30. Zinc in the Fetus and Neonate

31. Vitamin A Metabolism in the Fetus and Neonate

32. Vitamin E Metabolism in the Fetus and Newborn Infant

33. Vitamin K Metabolism in the Fetus and Neonate

   **Section VI - Lipid Metabolism**

34. Maternal-Fetal Transfer of Lipid Metabolites

35. Brown Adipose Tissue: Development and Function

36. Lipids as an Energy Source for the Premature and Full-Term Neonate

37. Ketone Body Production and Metabolism in the Fetus and Neonate

38. Long-Chain Fatty Acids in the Developing Retina and Brain

   **Section VII - Carbohydrate Metabolism**

39. Metabolism of Glucose and Methods of Investigation in the Fetus and Newborn

40. Carbohydrate Metabolism During Pregnancy

41. Oxygen Consumption and General Carbohydrate Metabolism of the Fetus

42. Role of Glucoregulatory Hormones in Hepatic Glucose Metabolism During the Perinatal Period

43. Cell Glucose Transport and Glucose Handling During Fetal and Neonatal Development

   **Section VIII - Protein Metabolism**

44. General Concepts of Protein Metabolism

45. Fetal Requirements and Placental Transfer of Nitrogenous Compounds

   **Section IX - Thermoregulation**

46. Temperature Control in Newborn Infants

47. Responses of the Fetus and Neonate to Hypothermia

   **Section X - Skin**

48. Structure and Development of Skin and Cutaneous Appendages

49. Physiologic Development of the Skin
Section XI - Fetal and Neonatal Cardiovascular Physiology

50. Cardiovascular Development

51. Developmental Electrophysiology in the Fetus and Neonate

52. Developmental Biology of the Pulmonary Vasculature

53. Development of the Gastrointestinal Circulation in the Fetus and Newborn

54. Physiology of Congenital Heart Disease in the Neonate

55. Neural Regulation of Blood Pressure During Fetal and Newborn Life

56. Developmental Effects on Fetal Circulation

57. Mechanisms Regulating Closure of the Ductus Arteriosus

58. Umbilical Circulation

59. Fetal and Placental Circulation During Labor

60. Physiology of Resuscitation

Section XII - The Lung

61. Normal and Abnormal Structural Development of the Lung

62. Regulation of Alveolarization

63. Physiologic Mechanisms of Normal and Altered Lung Growth Before and After Birth

64. Molecular Mechanisms of Lung Development and Lung Branching Morphogenesis

65. Regulation of Liquid Secretion and Absorption by the Fetal and Neonatal Lung

66. Upper Airway Structure: Function, Regulation, and Development

67. Regulation of Lower Airway Function

68. Functional Development of Respiratory Muscles

69. Mechanics of Breathing

70. Pulmonary Gas Exchange in the Developing Lung

71. Oxygen Transport and Delivery

72. Control of Breathing in Fetal Life and Onset and Control of Breathing in the Neonate

73. Basic Mechanisms of Oxygen Sensing and Response to Hypoxia

74. Evaluation of Pulmonary Function in the Neonate

75. Mechanisms of Neonatal Lung Injury

76. Impaired Lung Growth After Injury in Premature Lung

77. Antenatal Factors That Influence Postnatal Lung Development and Injury
Section XIII - Surfactant

79. Historical Perspective

80. Composition of Pulmonary Surfactant Lipids and Proteins

81. Structure And Development of Alveolar Epithelial Cells

82. Regulation of Surfactant-Associated Phospholipid Synthesis and Secretion

83. Hormonal Therapy for Prevention of Respiratory Distress Syndrome

84. Surfactant Treatment

85. Genetics and Physiology of Surfactant Protein Deficiencies

Section XIV - Physiology of Gastrointestinal Tract in the Fetus and Neonate

86. Trophic Factors and Regulation of Gastrointestinal Tract and Liver Development

87. Organogenesis of the Gastrointestinal Tract

88. Development of the Enteric Nervous System

89. Development of Gastric Secretory Function

90. Development of Gastrointestinal Motility

91. Development of the Exocrine Pancreas

92. Digestive-Absorption Functions in Fetuses, Infants, and Children

93. Development of the Intestinal Microbiome

Section XV - Liver and Bilirubin Metabolism

94. Organogenesis and Histologic Development of the Liver

95. Bile Acid Metabolism During Development

96. Neonatal Bilirubin Metabolism

97. Hereditary Contribution to Neonatal Hyperbilirubinemia

98. Mechanisms of Action of Phototherapy for Neonatal Hyperbilirubinemia

Section XVI - The Kidney

99. Embryogenesis and Anatomic Development of the Kidney

100. Functional Development of the Kidney in Utero

101. Development and Regulation of Renal Blood flow in the Neonate

102. Development of the Renin-Angiotensin System

103. Postnatal Development of Glomerular Filtration Rate in Neonates
104. Renal Transport of Sodium During Early Development
105. Potassium Homeostasis in the Fetus and Neonate
106. Role of the Kidney in Calcium and Phosphorus Homeostasis
107. Transport of Amino Acids in the Fetus and Neonate
108. Developmental Aspects of Organic Acid Transport
109. Concentration and Dilution of the Urine
110. Development of Acidification Mechanisms in the Fetus and Neonate
111. Response to Nephron Loss in Early Development

Section XVII - Fluid and Electrolyte Metabolism

112. Fluid Distribution in the Fetus and Neonate
113. Regulation of Acid-Base Balance in the Fetus and Neonate

Section XVIII - Developmental Hematopoiesis

114. Developmental Biology of Stem Cells: From the Embryo to the Adult
115. Developmental Granulocytopoiesis
116. Developmental Erythropoiesis
117. Developmental Megakaryocytopoiesis

Section XIX - Hemostasis

118. Developmental Hemostasis
119. Platelet–Vessel Wall Interactions

Section XX - Developmental Immunobiology

120. Host Defense Mechanisms Against Bacteria
121. Host-Fungi Interactions Relevant to the Newborn Infant
122. Host Defense Mechanisms Against Viruses
123. T-Cell Development
124. B-Cell Development
125. Mononuclear Phagocyte System
126. Normal and Abnormal Neutrophil Physiology in the Newborn
127. The Complement System of the Fetus and Newborn
128. Cytokines and Inflammatory Response in the Fetus and Neonate
129. Immunology of Human Milk and Host Immunity
130. Neonatal Pulmonary Host Defense

Section XXI - Neurology

131. Development of the Nervous System
132. Development of the Blood-Brain Barrier
133. Trophic Factor and Nutritional and Hormonal Regulation of Brain Development
134. Intraventricular Hemorrhage in the Neonate
136. Electroencephalography in the Premature and Full-Term Infant
137. Developmental Aspects of Pain

Section XXII - Special Sensory Systems in the Fetus and Neonate

138. Early Development of the Human Auditory System
139. Development of Taste and Smell in the Neonate

Section XXIII - Orthopedics

140. The Growth Plate: Embryologic Origin, Structure, and Function
141. Ontogenesis of Striated Muscle

Section XXIV - Endocrine Function

142. Hypothalamus: Neuroendometabolic Center
143. Growth Factor Regulation of Fetal Growth
144. Growth Hormone in the Fetus and Newborn
145. Luteinizing Hormone and Follicle-Stimulating Hormone Secretion in the Fetus and Newborn
146. Development of the Corticotropin-Releasing Hormone–Corticotropin System in the Mammalian Fetus
147. Fetal and Neonatal Adrenocortical Physiology
148. Fetal and Neonatal Thyroid Physiology

Section XXV - Ovary and Testis

149. Genetics of Sex Determination and Differentiation
150. Differentiation of the Ovary
151. Testicular Development and Descent

Section XXVI - Pathophysiology of Neonatal Diseases

152. Pathophysiology of Neonatal sepsis
153. Pathophysiology of Hypoglycemia in the Neonate
