

Table of contents

Foreword, by Joseph S. Alpert

Foreword, by E. Gordon DePuey III

Contributors

Chapter 1: Diagnostic Tools to Approach the Cardiac Patient

Case Presentations

1.1. Imaging of Atherosclerosis by FDG PET-CT

Chapter 2: Physics Principles and Instrumentation in Nuclear Cardiology

Case Presentations

2.1. Dose Infiltration at Site of Injection

2.2. Artifact Caused by Metal Object

2.3. Truncation Artifact

2.4. Motion Artifact

2.5. Diaphragmatic Attenuation Artifact

2.6. Breast Attenuation Artifact

2.7. Detector Malfunction in the PET System

2.8. Motion Artifact on PET/CT

Chapter 3: Radiopharmaceuticals and Protocols in Nuclear Cardiology

Cases Presentations

3.1. Biodistribution of ^{201}Tl and Clinical Protocols

3.2. Biodistribution of $^{99\text{m}}\text{Tc}$ -MIBI and Clinical Protocols

3.3. Dual Isotope Rest ^{201}Tl /Stress $^{99\text{m}}\text{Tc}$ -tetrofosmin Study

3.4. Extracardiac $^{99\text{m}}\text{Tc}$ -MIBI Uptake in a Tumor

3.5. Pattern of FDG Uptake in the Heart

3.6. Puerperal Breast Uptake of FDG: Dose Radiation Issues

3.7. Semiquantitative Analysis of Perfusion and Function

3.8. Myocardial Perfusion Imaging with PET

3.9. Biodistribution of $^{99\text{m}}\text{Tc}$ Pertechnetate

3.10. Gastrointestinal Radiopharmaceutical Uptake

Chapter 4: Stress Modalities to Evaluate Myocardial Perfusion

Cases Presentations

4.1. Exercise $^{99\text{m}}\text{Tc}$ -MIBI Demonstrating Multi-Vessel CAD with Borderline ECG Changes

4.2. Dipyridamole $^{99\text{m}}\text{Tc}$ -MIBI Demonstrating RCA and LCX Ischemia in a Patient with LBBB

4.3. Combined Dipyridamole-Low Exercise $^{99\text{m}}\text{Tc}$ -MIBI Demonstrating Multi-Vessel CAD

4.4. Combined Dipyridamole-Low Exercise $^{99\text{m}}\text{Tc}$ -MIBI with Severe ST-Segment Elevation

4.5. Dobutamine $^{99\text{m}}\text{Tc}$ -MIBI Demonstrating Extensive Three-Vessel CAD

4.6. Dipyridamole $^{99\text{m}}\text{Tc}$ -MIBI in a Patient with a Pacemaker

4.7. Adenosine $^{99\text{m}}\text{Tc}$ -MIBI Demonstrating Significant Endothelial Dysfunction

4.8. Differential Hepatic and Gastrointestinal Uptake of $^{99\text{m}}\text{Tc}$ -MIBI after Exercise and Dipyridamole Stress

4.9. Dipyridamole-Induced Coronary Steal and ST-Segment Depression

4.10. Interference of Medications with MPI

Chapter 5: Myocardial Perfusion Imaging: Detection of Coronary Artery Disease and Miscellaneous Clinical Applications

Cases Presentations

- 5.1. Left Main Occlusion Diagnosed by MPI
- 5.2. Myocardial Bridging of the LAD
- 5.3. Exercise-Induced Artifact in a Patient with LBBB
- 5.4. LAD Ischemia in a Patient with LBBB
- 5.5. Transient Ischemic LV Dilatation
- 5.6. Multi-vessel Disease on MPI and Myocardial Stunning
- 5.7. Reverse Distribution on 201Tl Imaging
- 5.8. Anomalous Takeoff of the RCA
- 5.9. Anomalous Takeoff of the LCA
- 5.10. Transposition of the Great Vessels
- 5.11. Moderate Lesion Causing Ischemia
- 5.12. Chest Pain Due to Multiple Pulmonary Emboli
- 5.13. Coronary Spasm
- 5.14. Semiquantitative Analysis Using Different Commercial Software Packages

Chapter 6: Myocardial Perfusion Imaging in the Emergency

Department

Cases Presentations

- 6.1. Occluded LCX Detected by Rest 99mTc-MIBI
- 6.2. Occluded OM Detected by Rest 99mTc-MIBI
- 6.3. Correlation of Rest 99mTc-MIBI and MRI for ACS
- 6.4. Normal Rest But Abnormal Stress MPI
- 6.5. Value of Prone Imaging for Rest MPI
- 6.6. AMI Diagnosed by Rest 99mTc-MIBI and 99mTc-Pyrophosphate
- 6.7. Acute Pulmonary Embolism as a Differential Diagnosis in the ED
- 6.8. AMI Detected by Rest 99mTc-MIBI
- 6.9. Acute Cholecystitis versus ACS

Chapter 7: Evaluation of Cardiac Function

Cases Presentations

- 7.1. RVG and LVEF: 8 versus 16 Frames
- 7.2. LVEF: Concordance Between RVG and Contrast Ventriculography
- 7.3. Gated SPECT and LVEF: Improved Accuracy with 16 Frames
- 7.4. Exercise-Induced Ischemia and LV Dysfunction Detected by RVG
- 7.5. Dipyridamole-Induced LV Dysfunction by RVG
- 7.6. Anthracycline-Induced Cardiomyopathy Detected by RVG
- 7.7. Evaluation of CHF by RVG
- 7.8. RVG SPECT to Follow-up Chemotherapy
- 7.9. RVG SPECT to Follow-up Heart Transplantation
- 7.10. LV Dysfunction Following Heart Transplantation
- 7.11. Aortic Insufficiency Evaluated by RVG SPECT
- 7.12. Eisenmenger's Syndrome Evaluated by RVG SPECT
- 7.13. Anterior MI Evaluated by RVG SPECT
- 7.14. Idiopathic Dilated Cardiomyopathy Evaluated by RVG SPECT
- 7.15. Pulmonary Fibrosis and Pulmonary Hypertension by RVG SPECT

Chapter 8: Evaluation of Myocardial Viability

Cases Presentations

- 8.1. Anterior Myocardial Infarction: 99mTc SPECT/FDG PET
- 8.2. Inferoseptal Myocardial Viability: 99mTc SPECT/FDG PET

- 8.3. Anterolateral Myocardial Viability: 99mTc SPECT/FDG PET
- 8.4. Anteroapical Myocardial Viability: 99mTc SPECT/FDG PET
- 8.5. Myocardial Viability: Anteroseptal, Inferior Wall and Apex (24H-201TI/FDG PET)
- 8.6. Myocardial Viability in a Diabetic Patient: Anterior and Inferior Wall (99mTc SPECT/FDG SPECT Single Acquisition)
- 8.7. Myocardial Infarction: Inferior Wall (99mTc SPECT/FDG SPECT Single Acquisition)
- 8.8. Implications of Attenuation Correction of FDG PET Images Compared with 99mTc-tetrofosmin Without Attenuation Correction
- 8.9. Myocardial Viability: Resting and Nitrate-Enhanced 99mTc-MIBI
- 8.10. Ischemia in LAD Territory Demonstrated by Nitrate-Enhanced 99mTc-MIBI
- 8.11. 18FDG SPECT More Sensitive Than Dobutamine Echocardiography for Detection of Myocardial Viability
- 8.12. Myocardial Viability and Prognosis (Rest 201TI/FDG SPECT)
- 8.13. Myocardial Viability and LV Remodeling (Rest-Redistribution 201TI and FDG SPECT)
- 8.14. Myocardial Infarction (Rest/Dobutamine and Delayed Gd-Enhancement MRI)

Chapter 9: Myocardial Perfusion Imaging for Cardiac Risk Stratification

Case Presentations

- 9.1. Patients Without Known Coronary Artery Disease
- 9.2. Added Value of Gated SPECT
- 9.3. Diabetic Women
- 9.4. Elderly
- 9.5. Post-myocardial Infarction
- 9.6. Post-angioplasty
- 9.7. Early, Symptomatic Post Coronary Artery Bypass Surgery
- 9.8. Late, Asymptomatic Post Coronary Artery Bypass Surgery
- 9.9. Extensive Coronary Calcium

Chapter 10: Nuclear Cardiology for Imaging the Effects of Therapy

Cases Presentations

- 10.1 . MPI Demonstrating Successful PCI
- 10.2 . MPI Post-Drug-Eluting Stent with Rapamycin
- 10.3 . Post-saphenous Graft Stent with Improved Perfusion and Function
- 10.4 . MPI Showing Successful CABG
- 10.5 . MPI Showing Poor Results of CABG
- 10.6 . Early Post-stent MPI Demonstrating Endothelial Dysfunction

Chapter 11: Risk Assessment Before Noncardiac Surgery

Case Presentations

- 11.1. Preoperative Evaluation of High-Risk Surgery in an Asymptomatic Patient with Poor Exercise Tolerance
- 11.2. Moderate Inferoapical Ischemia Improving with Medical Therapy in a Patient with Good Exercise Tolerance Demonstrated with Stress/Rest SPECT MPI Performed for Preoperative Evaluation and Follow-Up
- 11.3. Normal MPI in a Patient with Documented CAD Stratified as Low Preoperative Risk

Chapter 12: Applications of Myocardial Perfusion Imaging in Special Populations

Cases Presentations

- 12.1. MPI Detecting LAD Ischemia in a Women with Atypical Presentation
- 12.2. Atrial Fibrillation Inducing a Septal Artifact on a Patient with LBBB
- 12.3. Diabetes Mellitus in a Woman with Significant Ischemia on MPI
- 12.4. CHF and Chagas' Disease
- 12.5. Incremental Value of MPI in an Asymptomatic Man with a Positive Exercise ECG

Chapter 13: Pitfalls and Artifacts in Cardiac Imaging

Cases Presentations

- 13.1. Incorrect Axis Selection
- 13.2. Incorrect Base Selection
- 13.3. Suboptimal Display
- 13.4. Patient Motion
- 13.5. Incorrect Filtering and Small Ventricle Affecting LVEF and Volumes
- 13.6. Artifacts Related to Poor ECG Gating
- 13.7. Inferior Wall Attenuation Resolved by ECG Gating and Attenuation Correction
- 13.8. Breast Attenuation Artifact Resolved by Attenuation Correction
- 13.9. Artifact Related to LBBB

Chapter 14: Correlation of Nuclear Imaging with Cardiac MRI

Cases Presentations

- 14.1. Large Anterior MI Treated with Medical Therapy, LV Rupture and Death
- 14.2. Nontransmural MI with Collateral Circulation
- 14.3. Small Apical and Septal MI Treated with Stent Placement
- 14.4. Small MI, Viable Tissue and Function Recovery with Revascularization
- 14.5. Large Anterior MI with Significant Remodeling and Aneurysm Formation
- 14.6. Multivessel Myocardial Ischemia Detected by MRI

Chapter 15: Cardiac Applications of Multislice Computed Tomography

Cases Presentations

- 15.1. Anomalous Origin and Course of the RCA
- 15.2. Accessory Right-Sided Pulmonary Venous Ostia
- 15.3. Left Atrial Appendage Thrombus in a Patient with Atrial Fibrillation

Chapter 16: Correlation of Nuclear Cardiology with Stress

Echocardiography

Case Presentations

- 16.1. Concordance Between Stress Nuclear Imaging and Dobutamine Echocardiography to Demonstrate Myocardial Ischemia in Two-Vessel Territories (LAD and RCA)
- 16.2. Hyperdynamic Response of the LV to dobutamine with Echocardiography Masking Mild Ischemia
- 16.3. Multivessel (LAD and RCA) Ischemia Detected with Exercise/Rest Gated SPECT and LAD Ischemia Detected with Contrast-Enhanced Adenosine Echocardiography
- 16.4. Extensive Acute Anterior Wall MI with No-Reflow Phenomenon Demonstrated with Myocardial Contrast Echocardiography and SPECT

16.5. Two-Vessel CAD Detected with Both Dipyridamole/Rest Spect and Adenosine Stress Echocardiography with Ultrasonic Contrast Whereas There Was No Stress-Induced Wall Motion Abnormality on Dobutamine Echocardiography

16.6. Incremental Value of Parametric Imaging Associated with Contrast-Enhanced Adenosine Echocardiography

Chapter 17: Advances in Cardiac Applications for PET and PET/CT

Case Presentations

17.1. Endothelial Dysfunction Demonstrated with Cold Pressor Testing/Rest ^{13}N -ammonia PET

17.2. Feasibility of Integrated CT Angiography/ ^{13}N -ammonia PET Imaging

Chapter 18: Future Directions in Nuclear Cardiology

Case Presentations

18.1. Adenosine/Rest $^{99\text{mTc}}$ -teboroxime/Rest $^{201\text{Tl}}$ SPECT Images Demonstrating a Fixed Defect in the Inferior Wall and Partial Reversibility in the Inferoseptal Region

18.2. Stress/Rest $^{99\text{mTc}}$ -N-NOET Demonstrating Ischemia in the LAD Territory

18.3. $^{99\text{mTc}}$ -Annexin Demonstrating Apoptosis

18.4. $^{99\text{mTc}}$ -glucarate Demonstrating Acute Myocardial Necrosis in the Anterolateral Wall of the LV

18.5. Selective Adenosine Receptor Stress $^{99\text{mTc}}$ -MIBI/Rest $^{201\text{Tl}}$ Demonstrating Ischemia in the LAD Territory

18.6. Dobutamine/Rest $^{99\text{mTc}}$ -MIBI Demonstrating Extensive Three-Vessel CAD

18.7. Cardiac Transplant Rejection Demonstrated with $^{67\text{Ga}}$

18.8. Treatment of Heart Failure Monitored with $^{123\text{I}}$ -MIBG

18.9. $^{123\text{I}}$ -BIMPP Demonstrating Ischemic Memory in LAD Territory

18.10. Better Visualization of the Endocardial Borders with Contrast Echocardiography in an Obese Patient

18.11. Extensive Calcification on EBCT Leading to Further Testing and Diagnosis of Ischemia in the LAD Territory

18.12. Anteroseptal MI Demonstrated with Delayed-Gd-Enhanced MRI

18.13. Better Quality of SPECT Images with IR than FBP Reconstruction

Index
