

## **Table of Contents:**

1 Introduction

### Section 1: Basic pharmacological principles

2 The atom: the smallest unit of pharmacology

3 Bonds found in biological chemistry

4 Bonds continuation

5 Nomenclature: representation of chemical structures and basic terminology

6 Isomers

7 Free radicals

8 Acids and bases

### Section 2: Important primary metabolic components

9 Carbohydrates

10 Lipids

11 Amino acids and proteins

12 Purines and pyrimidines

13 Vitamins and minerals

### Section 3: Pharmacokinetics and pharmacodynamics

14 Pharmacokinetics and pharmacodynamics: introduction

15 Methods of administration

16 How do drugs get into cells?

17 Metabolism

18 Drug excretion

19 Pharmacodynamics: how drugs elicit a physiological effect

### Section 4: Plant pharmacology

20 Plant pharmacology. Introduction: secondary metabolites

21 Phenols

22 Terpenes

23 Amines and alkaloids

24 Glycosides

### Section 5: Orthodox medication

25 Orthodox medicine: introduction

26 Cardiovascular disorders

27 Problems with lipid metabolism

28 Blood disorders

- 29 Antimicrobials
- 30 Inflammation and the immune system
- 31 The nervous system
- 32 Analgesia and relief of pain
- 33 Neurological disease
- 34 Respiratory diseases
- 35 Gastrointestinal disorders
- 36 Urinary tract infection
- 37 Metabolic disorders
- 38 Reproductive hormones
- 39 Chemotherapy

#### Section 6: Toxicology

- 40 Toxicology

#### Section 7: The final analysis

- 41 Scientific tests
- 42 Information gathering and the final analysis
