

Table of Contents:

Section 1: Nuclear medicine in tumor diagnosis and therapy

Part A: Diagnosis

1. Tumor-seeking radiopharmaceuticals: nature and mechanisms
- 2 Radionuclide imaging of hepatic tumors
- 3 PET in lymphoma and malignant melanoma
- 4 Parathyroid imaging
- 5 Adrenocortical scintigraphy
- 6 Gallium scintigraphy in tumor diagnosis and management
- 7 Thallium-201 chloride: a tumor imaging agent
- 8 MIBG in the diagnosis of neuroendocrine tumors
- 9 Peptide receptor scintigraphy in oncology
- 10 The diagnostic role of radiolabeled antibodies in cancer
- 11 Cancer cell biology basis for nuclear oncology
- 12 Differentiated thyroid carcinoma
- 13 Medullary thyroid cancer
- 14 Breast scintigraphy
- 15 Pediatric tumors
- 16 Functional analysis of cancer therapy effects in other organs
- 17 The use of intraoperative probes in surgical oncology
- 18 The sentinel lymph node in surgical oncology
- 19 FDG PET Imaging of Head and Neck Cancer
- 20 External Beam Radiotherapy Treatment Planning with PET
- 21 PET in aerodigestive tumors
- 22 PET in gynecological tumors (breast, cervical and

ovarian)

23 Nuclear medicine imaging in pediatric oncology

24 Positron Emission Tomography (PET) in genitourinary tumors: prostate, bladder, testicular and renal cancer

25 Future clinical applications of PET (amino acid and nucleoside imaging)

26 PET imaging of brain tumors

Section 1: Nuclear medicine in tumor diagnosis and therapy

Part B: Radionuclide therapy

27 Principles of radionuclide therapy

28 Dosimetric and radiobiological considerations: The MIRD concept

29 Dosimetric and radiobiological considerations: Patient-individual dosimetry

30 Radioiodine therapy of the thyroid: Treatment of benign thyroid diseases

31 Radioiodine therapy of the thyroid: Treatment of thyroid malignancies

32 Phosphorus-32 therapy in myeloproliferative disorders

33 Palliation of bone pain

34 Radioimmunotherapy of hematologic neoplasms

35 Radioimmunotherapy of solid tumors

36 MIBG therapy

37 Receptor-targeted radiopeptide therapy

38 Use of radiolipiodol in the treatment of hepatic tumours

39 Alternative approaches to targeting therapy

40 New developments: Nuclear gene therapy

41 Atlas 1: PET and PET/CT

42 Atlas 2: SPET and SPET/CT

Section 2: Nuclear medicine in disorders of bones and joints

- 43 Bone scintigraphy: the procedure and interpretation
- 44 Evaluation of primary bone tumors
- 45 The evaluation of malignancy: metastatic bone disease
- 46 Assessment of infection
- 47 Radionuclide assessment of the painful joint prosthesis
- 48 Vascular manifestations
- 49 Bone scintigraphy in trauma
- 50 Bone scintigraphy in sports medicine
- 51 Growth and metabolic disorders
- 52 Arthritis: current status of scintigraphy and future trends
- 53 Radiation synovectomy

Section 3: Quantitative studies of gastrointestinal function

- 54 Salivary gland disorders
- 55 Esophageal function (transport and motility)
- 56 Gastric motility
- 57 Intestines: evaluation of absorption
- 58 Studies of small bowel and colonic transit
- 59 Hepatobiliary function: biliary kinetics
- 60 Scintigraphic measurement of hepatic function

Section 4: Nuclear medicine in acute care

- 61 Nuclear cardiology and cardiac transplantation
- 62 Cardiovascular conditions: venous thrombosis

- 63 Pulmonary embolism
- 64 Non-embolic disease of the lungs
- 65 Gastrointestinal bleeding
- 66 Cholescintigraphy
- 67 Neonatal hyperbilirubinemia
- 68 Nuclear medicine in acute care of neurological patients
- 69 Radio labeled agents for the localization of infection and inflammation
- 70 Undiagnosed fever
- 71 Inflammatory bowel disease
- 72 Nuclear imaging in cardiovascular infection and cardiac transplant rejection
- 73 The immunocompromised patient

Section 5: Nuclear cardiology

- 74 Radiopharmaceuticals for the study of the heart
- 75 Radionuclide ventriculography and the assessment of impaired ventricular function
- 76 Infarct avid imaging and myocardial perfusion scintigraphy techniques using single photon radiotracers
- 77 Cardiac positron emission tomography
- 78 Cardiac stress
- 79 The detection of coronary artery disease
- 80 Assessment of prognosis in patients with known or suspected coronary artery disease
- 81 Assessment after myocardial revascularization
- 82 Assessment of myocardial viability in dysfunctional myocardium
- 83 Myocardial infarction: the assessment of thrombolysis
- 84 Congenital heart disease

85 Single-photon imaging of myocardial metabolism: the role of iodine 123 fatty acids and fluorine-18 deoxyglucose

86 Clinical applications of PET

87 Myocardial innervation: imaging and quantification

88 Nuclear medicine techniques in the assessment of human thrombosis and atheroma

Section 6. Nuclear medicine in neurological and psychiatric diagnosis

89 The blood-brain barrier

90 Lipophilic tracers: the amines

91 Lipophilic tracers for the study of regional cerebral blood flow

92 Ligands for neuroreceptor imaging by positron or single photon emission tomography

93 PET tracers for brain scanning

94 Neuroactivation

95 Image analysis in brain SPECT and PET

96 SPECT brain imaging in cerebrovascular disease

97 Nuclear medicine in the management of a patient with epilepsy

98 Nuclear medicine and the management of patients with Parkinson's movement disorders

99 Anxiety disorders and affective disorders

100 Addictions

101 The management of patients with schizophrenia

102 PET and SPECT imaging in evaluating Alzheimer's disease and related dementias

103 Nuclear medicine and drug studies in the brain

104 Cerebrospinal fluid physiology, clearance flow studies and cerebrospinal fluid shunt studies

105 Atlas 3: PET brain atlas

Section 7: Nuclear medicine in renal disorders

- 106 Overview of renal nuclear medicine
- 107 Radiopharmaceuticals: their intrarenal handling and localization
- 108 Dynamic static renal imaging
- 109 Quantitative evaluation of clearance
- 110 Measurement and interpretation of renal transit times
- 111 The role of PET in renal nuclear medicine
- 112 Renal infection
- 113 Pediatric aspects of radionuclides in nephrourology
- 114 Nuclear medicine in the clinical diagnosis and treatment of obstructive uropathy
- 115 Vascular disorders, with emphasis on hypertension
- 116 Renal failure
- 117 Space-occupying lesions and trauma
- 118 Renal transplant evaluation
- 119 The genital tract

Section 8: Basic sciences

- 120 Fundamental molecular/cell biology
- 121 Radioisotope production
- 122 Radiochemistry
- 123 Radiopharmacy
- 124 Basic physics and detection of radiation
- 125 Nuclear medicine imaging instrumentation
- 126 Nuclear medicine computers: Basic principles
- 127 Nuclear medicine computers: Applications

128 Single photon emission computed tomography (SPECT)

129 Positron emission tomography (PET)

130 Primer on molecular imaging

131 Radiation protection and dosimetry in clinical practice

132 Clinical decision making: an introductory, quantitative approach to diagnostic investigations

133 Decision analysis fundamentals
