

Table of Contents

Introduction

Part I. Physiological MR Techniques:

1. Fundamentals of MR spectroscopy
2. Quantification and analysis in MR spectroscopy
3. Artifacts and pitfalls in MR spectroscopy
4. Fundamentals of diffusion MR imaging
5. Human white matter anatomical information revealed by diffusion tensor imaging and fiber tracking
6. Artifacts and pitfalls in diffusion MR imaging
7. Cerebral perfusion imaging by exogenous contrast agents
8. MRI detection of regional blood flow using arterial spin labelling
9. Imaging perfusion and blood-brain barrier permeability using T1-weighted dynamic contrast-enhanced MRI
10. Susceptibility weighted imaging
11. Artifacts and pitfalls in perfusion MR imaging
12. fMRI - methodologies, practicalities and pitfalls

Part II. Cerebrovascular Disease:

13. Cerebrovascular disease: overview
14. MR spectroscopy in stroke
15. Diffusion and perfusion MR in stroke
16. Arterial spin labelling in stroke
17. MR diffusion tensor imaging in stroke
18. MR spectroscopy in severe obstructive carotid artery disease
19. Perfusion and diffusion imaging in chronic carotid disease
20. Susceptibility imaging and stroke

Part III. Adult Neoplasia:

21. Adult neoplasia: overview
22. MRS in adult neoplasia
23. Diffusion MR imaging in adult neoplasia
24. Perfusion MR imaging in adult neoplasia
25. Permeability imaging in adult neoplasia
26. Functional MRI in presurgical planning

Part IV. Infection, Inflammation and Demyelination:

27. Physiological imaging in infection, inflammation and demyelination: overview
28. MR spectroscopy in intracranial infection
29. Diffusion and perfusion MR imaging of intracranial infection
30. MR spectroscopy in demyelination and inflammation
31. Diffusion and perfusion MRI in inflammation and demyelination
32. Physiological MR to evaluate HIV-associated brain disorders

Part V. Seizure Disorders:

33. Seizure disorders
34. MR spectroscopy in seizure disorders
35. Diffusion and perfusion MR imaging in seizure disorders

Part VI. Psychiatric and Neurodegenerative Diseases:

36. Psychiatric and neurodegenerative disease: overview
37. MR spectroscopy in psychiatry
38. Diffusion MR imaging in neuropsychiatry and aging
39. ¹H MR spectroscopy in aging and dementia
40. Physiological MR in neurodegenerative diseases
41. Iron imaging in neurodegenerative disorders
- Part VII. Trauma:
 42. Potential role of MR spectroscopy, diffusion-weighted/diffusion tensor imaging and perfusion imaging in traumatic brain injury: overview
 43. MR spectroscopy in traumatic brain injury
 44. Diffusion and perfusion-weighted MR imaging in head injury
 45. Susceptibility weighted imaging in traumatic brain injury
- Part VIII. Pediatrics:
 46. Physiological MR of the pediatric brain: overview
 47. Physiological MRI of normal development and developmental delay
 48. MR spectroscopy in hypoxic brain injury
 49. The role of diffusion and perfusion weighted brain imaging in neonatology
 50. Physiological MR of pediatric brain tumors
 51. Physiological MRI techniques and pediatric stroke
 52. MR spectroscopy in pediatric white matter disease
 53. MR spectroscopy of inborn errors of metabolism
 54. Pediatric trauma
 55. Physiological MR of the spine
- Index.
