

Table of Contents

Introduction: Basic principles and radiological investigations

Plain films

Screening/fluoroscopy

Ultrasound

Computed tomography

Magnetic resonance imaging

Nuclear medicine

Interventional radiology

Section A. The Chest: Introduction to the chest radiograph

Cardiomegaly

Heart failure

Pulmonary oedema

Pleural effusion

Lobar pneumonia

Bronchopneumonia

Pneumothorax

Pulmonary collapse

Pulmonary nodule

Carcinoma bronchus

Chronic obstructive airways disease

Cavitating mass

Tuberculosis

Sarcoidosis

Mediastinal mass

Opaque hemi-thorax

Fibrosing alveolitis

Pneumocystis infection

HIV and the chest

Cystic fibrosis

Bronchiectasis

Pulmonary emboli

Section B. Gastrointestinal System: Interpreting the abdominal radiograph

Perforation

Small bowel obstruction

Large bowel obstruction

Barium swallow

Barium meals

Bowel carcinoma

Diverticular disease

Crohn's disease

Ulcerative colitis

Gallstones

Acute pancreatitis

Liver metastases

Abdominal abscess

Subphrenic abscess

Section C. Central Nervous Systems: Haemorrhage

Subarachnoid haemorrhage

Cerebral infarction

Brain atrophy
Ring enhancing lesions
MRI of the pituitary
Multiple sclerosis
Cerebrovascular disease
Section D. Bone: Osteoarthritis
Rheumatoid arthritis
Gout
Ankylosing spondylitis
Paget's disease
Back pain
Osteoporosis
Osteomyelitis
Metastases/tumours
Fractures
Section E. Renal, Gynaecological and Vascular Systems: Horseshoe kidneys
Renal colic
Hydronephrosis
Renal tumour
Bladder cancer
Ovarian cancer
Fibroids
Obstetric scans
Mammography
Deep vein thrombosis
Aortic aneurysm
Vascular intervention.
