Table of Contents:

- 1. The periodontal tissues
- 2. The oral environment in health and disease
- 3. Host-parasite interaction
- 4. The aetiology of periodontal disease
- 5. Mechanisms of disease production
- 6. The effect of systemic factors on the periodontal tissues
- 7. Acquired immunodeficiency syndrome (AIDS)
- 8. The natural history of periodontal disease
- 9. Classification of periodontal diseases
- 10. Epidemiology of periodontal disease the size of the problem
- 11. Prevention of periodontal disease
- 12. Clinical features of chronic periodontal disease
- 13. Diagnosis, prognosis and treatment plan
- 14. Diagnosis tests of periodontal disease activity
- 15. Basic treatment of chronic gingivitis and periodontitis
- 16. The use of antiseptics, enzymes and oxygenating agents as adjuncts in supragingival plaque control
- 17. The possible use of antibiotics as adjuncts in the treatment of chronic periodontitis
- 18. Antibiotic prophylaxis for susceptible patients undergoing periodontal treatment
- 19. Surgical periodontal treatment
- 20. Management of bone defects and furcation involvement
- 21. Mucogingival problems and their treatment
- 22. The periodontal abscess
- 23. Early onset periodontitis (juvenile periodontitis/aggressive periodontitis)
- 24. Acute and infectious lesions of the gingiva
- 25. Acute necrotizing ulcerative gingivitis
- 26. Epulides and tumours of the gingivae and oral mucosa
- 27. Occlusion
- 28. Spinting
- 29. Dental implants and peri-implantology
- 30. The relationship between periodontal and restorative treatment Index
