**Table of Contents**

**Part 1 Tricks of the trade.**

1 Know the anatomy.
2 Transvenous pacemaker implantation.
3 The pulse generator or ICD pocket.
4 Epicardial or epimyocardial pacing.
5 Problems with right ventricular apical pacing.
6 What type of lead fixation device do I use?.
7 Consider steerable stylets or catheters.
8 Safety in numbers – the belt and braces technique.
9 Do old leads need extraction?.
10 Stenosed venous channels.
11 Use of the coronary venous system.
12 Consider growth in teenagers.

**Part 2 Patients, principles and problems.**

*Section A No previous cardiac surgery: pacemaker/ICD required.*

13 Congenital atrioventricular block.
14 Congenitally corrected L-transposition of the great vessels.
15 Congenital long QT syndromes.

*Section B No previous cardiac surgery: pacemaker/ICD a challenge.*

16 Atrial septal defects and patent foramen ovale.
17 Persistent left superior vena cava.
18 Dextrocardia.
19 Ebstein’s anomaly.

**Section C Previous corrective or palliative cardiac surgery.**

20 D-Transposition of the great vessels.
21 Septal defects including tetralogy of fallot.
22 Repaired Ebstein’s anomaly.

**Section D No venous access to ventricle.**

23 Univentricular heart.

Concluding remarks.
