

# Table of contents

<b>Chapter 1</b>			
<b>Introduction to chemo-mechanical shaping of the endodontic system</b> .....	1		
The chemo-mechanical preparation phase in endodontic treatment .....	1		
Objectives of root canal shaping .....	6		
<b>Chapter 2</b>			
<b>Basic principles of chemo-mechanical shaping of the endodontic system</b> .....	11		
Evolution of the principles of chemo-mechanical shaping .....	11		
<b>Chapter 3</b>			
<b>Metallurgy of endodontic instruments, evolution and innovation in the production</b> .....	21		
Production and features of stainless-steel endodontic instruments .....	21		
Production and characteristics of nickel-titanium endodontic instruments .....	28		
Background .....	28		
General features of NiTi .....	28		
Principles of NiTi alloy metallurgy .....	28		
The NiTi alloy: from metallurgy to clinical practice .....	32		
Evolution of mechanical Ni-Ti preparation systems .....	37		
Background .....	37		
Evolution to reduce the risk for fatigue fracture .....	38		
Evolution to reduce the risk for torsional fracture .....	40		
The reciprocating movement in endodontics .....	42		
<b>Chapter 4</b>			
<b>Scouting, glide path and pre-flaring</b> .....	65		
Background .....	65		
Definitions .....	65		
Clinical strategies for canal scouting and glide path preparation .....	73		
Easily negotiated canals .....	77		
Difficult to negotiate canals .....	77		
Irrigants and lubricants in the initial phases of the treatment .....	96		
<b>Chapter 5</b>			
<b>“Basic” preparation of the root canal</b> .....	99		
Background .....	99		
Objectives of the “basic” preparation of the root canal .....	99		
New trends in root canal shaping .....	104		
Techniques and instruments for basic preparation of the root canal .....	112		
Mechanical preparation of anatomical irregularities in the coronal and middle third .....	117		
<b>Chapter 6</b>			
<b>Apical preparation and finishing</b> .....	131		
Background .....	131		
Approach to the apex .....	131		
The anatomical bases of the apical third .....	133		
Techniques to estimate the ideal dimension of apical preparation .....	135		
Influence of apical preparation on canal debridement and cleaning .....	136		
Clinical strategies for apical preparation .....	139		
Visual gauging .....	139		
Special cases .....	141		
<b>Chapter 7</b>			
<b>Cleaning of the root canal system</b> .....	151		
Background .....	151		
Basic root canal irrigation protocol .....	152		
Sodium hypochlorite (NaOCl) .....	154		
Ultrasonic activation of sodium hypochlorite .....	155		
Alternative irrigant activation techniques .....	159		
Ethylenediaminetetraacetic acid (EDTA) .....	163		
All-in-one irrigants for continuous chelation .....	164		
Additional disinfection systems .....	164		
Chlorhexidine (CHX) .....	164		
Light-activated disinfection .....	165		
Laser .....	166		
Ozone .....	166		
Use of alternative antibacterial systems .....	166		
Cleaning techniques without preparation .....	167		
<b>Subject Index</b> .....	173
