PRESENTATIONS	16
Daniel Edelhoff	17
Carlo Paolo Marinello	18
Renato Piantanida	20
Francesco Benazzo	21
INTRODUCTION	22
1 Relationship between dental occlusion and posture	26
Dental occlusion and posture: myth or science?	28
Evidence-Based Dentistry and Clinical Evidence-Based Dentistry	40
Neurophysiological aspects of Postural Syndrome	69
Problems related to postural dysfunction	79
2 The Temporomandibular Joint (TMJ). Anatomy and the main postural muscles	114
The Temporomandibular Joint	116
Depressor and levator muscles of the jaw	126
The cervical spine	138
Mandibular dynamics	140
Shoulder girdle and neck muscles	144
Pathological kinesiology of the shoulder	156
The Brachial Plexus	160
Pelvic muscles	164
Musculoskeletal biomechanics of Postural Syndrome	170
3 Diagnostic imaging	178
Instrumental exams	180
Magnetic Resonance Imaging (MRI) of the Temporomandibular Joint	190
Interpretation and recognition of Temporomandibular Joint structures	196
MRI of Temporomandibular Joint Pathologies	200
Muscle imbalance using Magnetic Resonance Imaging	222
Supplements and drugs in the treatment of Postural Syndrome	230
MRI prescription	232

4 Diagnosis	240
Anamnesis and medical records	242
Clinical examination	246
Applied Kinesiology Complementary Testing	268
Trigger points	274
5 Postural Syndrome therapy	282
Occlusal curves	284
Vertical dimension	302
Occlusal vertical dimension, TMJ, and posture	316
Occlusal splints	344
Postural Syndrome with joint pathology due to tension and overloading (stages 1/2)	448
Postural Syndrome with reducible displacement (stage 3)	466
Postural Syndrome with non-reducible displacement (stage 4)	516
Postural Syndrome with degenerative joint disease (stage 5)	524
Postural Syndrome with advanced degenerative joint disease (stage 6)	532
Temporomandibular Joint arthrocentesis	550
Esthetics, function, and posture: a new approach to dental rehabilitation	556
6 Functional rehabilitation treatment	568
Treatment goals	570
The professional therapists of rehabilitation	573
Home-based exercises for the patient	576
7 Occlusal balance	580
The modern concept of Occlusal Balance	583
Occlusal and wear properties of restorative materials	586
8 Occlusal physiology and restorative materials	610
Differences in the restoration of anterior and posterior teeth	612
Guiding principles for choosing a restorative material for anterior and posterior teeth	615
Characteristics of restorative materials	619

9 Adhesion	678
Adhesive Materials	680
Dental adhesive classification	690
Enamel, dentin, and adhesion	699
Composites and adhesion	704
Ceramics and adhesion	706
Metals and adhesion	710
10 Properties of adhesive materials	742
Optical properties of adhesive materials	744
Functional properties of adhesive materials	770
Minimally invasive properties of adhesive materials	774
Mechanical and physical characteristics of composites used with direct and indirect techniques	774
Margin accuracy of hand-made and CAD-CAM adhesive restorations	783
Adhesive cements: advantages of using light-cured composites as cementing agent	808
Instructions for using adhesive and/or retentive prosthesis	812
11 The importance of correct lingual function in orthodontics and posture	844
The tongue, its musculature, and its innervation	847
Physiology of typical swallowing	851
Classification of atypical deglutition	855
Neurosensory activation	863
Defects induced by a short frenulum	867
Conclusions	868
BIBLIOGRAPHY	870
