Table of Contents

Craniosynostosis: A Historical Overview
Discovery of MSX2 Mutation in Craniosynostosis: A Retrospective View
Regulation of Calvarial Bone Growth by Molecules Involved in the Craniosynostoses
Signal Transduction Pathways and Their Impairment in Syndromic Craniosynostosis
The Molecular Bases for FGF Receptor Activation in Craniosynostosis and Dwarfism Syndromes
Recurrent Germline Mutations in the FGFR2/3 Genes, High Mutation Frequency, Paternal Skewing and Age-Dependence
Apert, Crouzon, and Pfeiffer Syndromes
Muenke Syndrome
Saethre-Chotzen Syndrome: Clinical and Molecular Genetic Aspects
Craniofrontonasal Syndrome: Molecular Genetics, EFNB1 Mutations and the Concept of Cellular Interference
Uncommon Craniosynostosis Syndromes: A Review of Thirteen Conditions
Metopic Craniosynostosis Syndrome Due to Mutations in GLI3
Craniosynostosis and Chromosomal Alterations
Nonsyndromic Craniosynostoses
Molecular Genetic Testing of Patients with Craniosynostosis
Prenatal Sonographic Diagnosis of Craniosynostosis
Clinical Approach to Craniosynostosis
Imaging Studies and Neurosurgical Treatment
Maxillofacial Examination and Treatment
