

CONTENTS:

Pulmonary alveolar proteinosis historical overview

PAP in childhood – time to adapt classification: “congenital PAP” – an old misnomer

History of whole lung lavages in pediatric PAP – not all PAPs are the same

Epidemiology and burden of disease

Pathogenesis-driven classification of PAP

Autoimmune pulmonary alveolar proteinosis

The complexity of Secondary Pulmonary Alveolar Proteinosis (SPAP)

Diagnostic workup

PAP: the importance of genetic testing

Pulmonary alveolar proteinosis: disease activity and progression

Whole lung lavage: history, current practice and future perspectives

GM-CSF augmentation therapy

Pulmonary alveolar proteinosis: plasmapheresis, B cells depletion and lung transplantation

PAP complications: infections and fibrosis

PAP in children and transition management

New treatment strategies and artificial intelligence

Pulmonary alveolar proteinosis
