Authors.....	v
Preface	xi
Foreword	xiii

■ 1. Stem Cells 1

Francesco Alviano Laura Bonsi

1.1. Timeline of stem cell research milestones	2
1.2. Definition of stem cell	5
Recommended reading and references	5

■ 2. Pluripotent stem cells and reprogramming 7

Valentina Fossati Kriti Kalpana Nicolette Pirjanian Chandrika Rao Jimena Zulueta Silvia Velasco

2.1. Embryonic stem cells.....	7
2.1.1. Optimization of the culture conditions.....	9
2.2. Induced Pluripotent Stem Cells (iPSCs).....	9
2.3. Applications of pluripotent stem cells.....	12
2.4. Somatic Cell Nuclear Transfer - SCNT	18
2.5. Programming of Adult Cells	18
2.5.1. 3D Organoids.....	19
2.5.2. Bioreactors, microfluidics and organs-on-a-chip	23
2.6. Applications of iPSCs in space and microgravity	23
Recommended reading and references	24

■ 3. Adult Stem Cells 27

Pasquale Marrazzo Francesco Alviano Laura Bonsi

3.1. Biological characteristics of adult stem cells	27
3.2. Adult stem cells and the concept of “plasticity”	29
3.3. Mesenchymal Stem Cells (MSCs)	30
3.3.1. Historical background	30
3.3.2. Identity of the MSCs.....	31
3.3.3. Heterogeneity of Mesenchymal Stem Cells.....	32
3.3.4. Immunomodulatory Properties of Mesenchymal Stem Cells	33
3.3.5. MSC Microvesicles and Exosomes.....	33

3.4. Multilineage-differentiating Stress-Enduring Cells (Muse).....	34
3.5. Potential Uses of Adult Stem Cells.....	34
3.5.1. Immunological Plasticity of MSCs.....	36
Recommended reading and references	36

■ 4. Haematopoiesis and Haematopoietic Stem Cell Transplantation.....39

Laura Bonsi Francesco Alviano Francesca Bonifazi Enrico Maffini

4.1. The Haematopoietic Stem Cell.....	40
4.2. Study of HSC proliferation/differentiation	44
4.3. The Haematopoietic Niche: cellular structure and molecular mechanisms of the microenvironment.....	45
4.4. Soluble factors acting within the niche	47
4.5. Haematopoietic Stem Cell Transplantation.....	48
4.5.1. Autologous HSCT	49
4.5.2. Allogeneic HSCT.....	49
4.5.3. Conditioning Regimens.....	50
4.5.4. Graft-versus-host disease (GvHD).....	51
Recommended reading and references	53

■ 5. Stem cells of the vascular system.....55

Gianandrea Pasquinelli Sabrina Valente Annalisa Astolfi

5.1. Embryological origin of the vascular system.....	55
5.2. Transcriptional control of vascular specification.....	57
5.2.1. Endothelial specification.....	57
5.2.2. Arteriovenous specification	59
5.2.3. Lymphatic specification	59
5.3. Molecular control of angiogenesis	61
5.4. Structure of the adult vascular system.....	62
5.4.1. Vascular system	62
5.4.2. Lymphatics	63
5.5. The endothelial cell	64
5.5.1. Morphology	64
5.5.2. Heterogeneity	66
5.5.3. Functions	67
5.5.4. Phenotypic markers	69
5.6. Circulating endothelial progenitors of the adult	69
5.6.1. Methods of EPC isolation	72
5.6.2. Updated EPC terminology	73
5.7. Resident Vascular Progenitors and Stem Cells	73
5.7.1. The stem cell niche of the vascular wall	73
5.7.2. Progenitors and stem cells.....	75
5.7.3. The role of stem cells in human vascular disease	75
5.7.4. The role of vascular stem / progenitor cells in cancer	76
5.8. Smooth muscle cells	76
5.8.1. Embryological heterogeneity	78
5.8.2. Phenotypic heterogeneity	78

5.8.3. Smooth Muscle Cell progenitors	78
5.8.4. Pathological phenotypes of SMC	78
5.9. Other vascular cytotypes	79
5.9.1. Pericytes.....	79
5.10. Endothelial-mesenchymal transition	80
5.11. Vascular stem cells derived from reprogramming techniques.....	80
5.12. Multivesicular bodies, exosomes and tunnelling nanotubes	81
Recommended reading and references	83

■ 6. Stem cells and the heart85

Carlo Ventura Claudia Cavallini Elena Olivi Riccardo Tassinari

6.1. Introduction.....	85
6.2. Molecular basis of cardiac specification	86
6.3. Heart, cardiovascular diseases, and stem cells	89
6.3.1. Pluripotent stem cells	90
6.3.2. Human cardiac organoids: a recent revolution in disease modelling and regenerative medicine.....	94
6.3.3. Adult stem cells	95
6.4. Open questions about stem cell transplantation in ischemic heart disease	103
6.5. A different point of view.....	105
Recommended reading and references	106

■ 7. Stem cells in muscle development, diseases and regeneration.....109

Maurilio Sampaolesi

7.1. Myogenesis	110
7.1.1. Molecular signals of myogenesis.....	111
7.1.2. MicroRNAs and myogenesis.....	113
7.1.3. Prenatal muscle precursors and differentiation waves	115
7.1.4. First phase of myogenesis	116
7.1.5. Second phase of myogenesis	116
7.1.6. Somitogenesis	116
7.1.7. Head and trunk myogenesis.....	117
7.1.8. Adult myogenesis.....	117
7.2. Skeletal muscle disorders	118
7.2.1. Animal models of skeletal muscle disorders	121
7.2.2. Cell-based therapies in skeletal muscle disorders.....	123
7.3. Conclusions and perspectives.....	129
Acknowledgements	130
Recommended reading and references	131

■ 8. Mesenchymal stem cells: cartilage135

Livia Roseti Brunella Grigolo

8.1. Cartilage Tissue	135
8.2. Articular cartilage	135

8.3. Cartilage diseases	138
8.4. Regenerative medicine: A groundbreaking approach in the treatment of cartilage diseases	139
8.5. Cartilage regeneration: past, present, and future	140
8.6. Mesenchymal stem cells for cartilage regeneration	141
8.7. Mesenchymal stem cell secretome	144
8.8. Mesenchymal Stem Cells and Gene Therapy	145
8.9. Conclusion.....	146
Recommended reading and references	146

■ 9. Bone stem cells.....149

Nicola Baldini Gemma Di Pompo

9.1. Bone tissue.....	149
9.2. The discovery of a new population of bone marrow stem cells: stromal stem cells.....	150
9.2.1. Heterogeneity of MSCs: limitations in selection and characterization of the mesenchymal stem fraction.....	151
9.2.2. In vitro phenotypic markers.....	152
9.2.3. In vivo phenotypic markers	152
9.3. The bone marrow stem cell niche: a more in-depth definition	154
9.4. Bone marrow stromal cells as cells of the vascular wall: the theory of pericytes.....	155
9.5. Stem cells and bone regeneration.....	155
9.5.1. MSCs and bone regeneration	157
9.5.2. Sources of MSCs for bone regeneration	157
9.5.3. Factors regulating MSCs during bone regeneration	158
9.5.4. Bone repair mechanisms mediated by MSCs	159
9.5.5. MSC-based therapy.....	160
9.5.6. Therapeutic applications of MSCs in clinical practice	160
Recommended reading and references	161

■ 10. Dental stem cells.....163

Giovanna Orsini Thimios Mitsiadis

10.1. Tooth Development and Dental Regeneration	163
10.2. The tooth as a source of stem cells	164
10.3. Dental Repair and Regeneration	165
10.4. Nanotechnological applications in regenerative dentistry.....	166
Recommended reading and references	167

■ 11. Skin regeneration.....169

Davide Melandri Valeria Purpura Catuscia Orlandi Paola Minghetti Elena Bondioli

11.1. The skin: organ histology and function	169
11.1.1. Dermis.....	169
11.1.2. Dermal-epidermal junction	171
11.1.3. Epidermis	171
11.2. Cutaneous stem cells	173
11.2.1. Stem cells in the dermis.....	173
11.2.2. Epidermal stem cells.....	173

11.3. Mechanisms of tissue repair	175
11.3.1. Alteration of the wound healing process.....	177
11.3.2. Repair and regeneration.....	177
11.4. Clinical application of tissue engineering for skin care	178
11.4.1. Regulatory framework	180
11.4.2. Cells as drugs and the evolution of cell cultures.....	181
11.4.3. Engineered dermis	182
11.4.4. Engineered epidermis	184
Recommended reading and references	187

■ 12. Corneal regeneration: From discovery to approval of an advanced stem cell therapy medicinal product in Europe189

*Graziella Pellegrini Alessandro Lambiase Claudio Macaluso Augusto Pocobelli Paolo Vinciguerra
Gian Maria Cavallini Pietro Ducange Giulia Galaverni Davide Adamo
Vincenzo Giuseppe Genna Paolo Rama*

12.1. Introduction.....	189
12.2. Corneal therapy	190
12.3. Localization/identification of stem cells	190
12.4. Predictivity of clinical efficacy (potency marker).....	191
12.5. Carrier/support selection	192
12.6. Therapeutic rationale.....	194
12.7. Alternative techniques	196
12.8. Patient selection	197
12.9. Clinical Protocol and Retrospective Studies	198
12.10. Process Controls	199
12.11. Risk-Based Approach	199
12.12. The need for public-private partnerships.....	201
Conclusions	202
Acknowledgements	202
Recommended reading and references	203

■ 13. Intestinal stem cells and the gut microenvironment.....207

<i>Roberta Costa Elisa Boschetti Giacomo Lanzoni.....</i>	<i>207</i>
13.1. Anatomy of the intestinal tract	207
13.2. Intestinal stem cells.....	209
13.2.1. Cellular and structural organization of the crypt-villus axis	209
13.2.2. Origin of the intestinal epithelium	211
13.2.3. Identification and localization of intestinal stem cells	212
13.3. Intestinal stem cells and the stem cell niche	215
13.4. Molecular pathways and the intestinal stem cell regulation mechanism	216
13.4.1. WNT signalling pathway	217
13.4.2. Notch signalling.....	219
13.4.3. BMP signalling.....	221
13.4.4. Hedgehog signalling.....	222
13.4.5. Epidermal Growth Factor (EGF) Signalling.....	223
13.4.6. Hippo pathway	223

13.4.7. Interaction between molecular signalling and stemness niche determination	224
13.5. Other factors influencing stem cell regulation	224
13.5.1. Insoluble factors	224
13.5.2. Interleukins	225
13.5.3. Microbiome	226
13.6. In vitro culture of intestinal stem cells	228
13.7. Intestinal organoids	229
Recommended reading and references	231

■ 14. Pancreatic progenitor cells and regenerative therapies for diabetes233

Francesca Paris Giacomo Lanzoni

14.1. Summary	233
14.2. Introduction	233
14.3. Glossary	234
14.4. Pancreas development	235
14.5. Islet transplantation in Type 1 Diabetes	244
14.6. Stem cells, progenitors and other sources of β cells for diabetes therapy	245
14.6.1. Differentiation of ESCs and iPSCs through β cells	245
14.6.2. Generation of β cells from adult cells	248
14.6.3. Generation of β cells from islet cells	248
14.6.4. Generation of β cells from acinar and ductal pancreatic cells	249
14.6.5. Generation of cells from adult pancreas progenitor cells	250
14.7. Conclusions and future perspectives	251
Recommended reading and references	252

■ 15. Stem Cells and the Liver255

Fabio Marongiu

15.1. Morphological and functional characteristics of the liver	255
15.2. Embryonic development of the liver	256
15.3. Liver regeneration and progenitor cells	258
15.3.1. Physiological turnover	258
15.3.2. Regeneration after acute damage	258
15.3.3. Regeneration after chronic damage	259
15.4. Stem cell transplantation for the regeneration of the liver	260
15.4.1. The use of stem cells for the reduction of fibrosis	260
15.4.2. Differentiation of stem cells into hepatocytes and their possible applications	261
15.4.3. Differentiation in other liver cell types	264
Recommended reading and references	265

■ 16. Stem Cells in Kidney Injuries267

Valeria Pizzuti Giorgia Comai Valeria Corradetti Francesca Bianchi Andea Angeletti Gaetano La Manna

16.1. Introduction	267
16.2. Renal progenitor cells	268
16.2.1. Renal progenitor cells in renal injury	270
16.3. MSCs in the treatment of renal disease	271

16.3.1. Mode of action of MSCs	274
16.4. Conclusions	276
Recommended reading and references	277

■ 17. Neurogenesis in the adult brain 281

Corinne Quadalti Vito Antonio Baldassarro Luciana Giardino Laura Calzà

17.1. The end of a dogma: not only “permanent” neurons in the brain	281
17.2. The neural stem cell: from development to the mature CNS	282
17.3. Constitutive neurogenesis in the adult brain.....	284
17.3.1. The neurovascular niche	286
17.3.2. The SVZ-OB system	287
17.3.3. The SGZ-DG system	288
17.3.4. The hypothalamus.....	290
17.3.5. Other brain areas: injury-induced neurogenesis.....	291
17.3.6. “Omics” for adult neurogenesis	292
17.4. Functional significance and regulation.....	292
17.5. From neurospheres to brain organoids: possibilities and limitations.....	295
Recommended reading and references	297

■ 18. Placental stem cells..... 301

Marta Magatti Anna Cargnoni Antonietta Silini Laura Bonsi Francesco Alviano Ornella Parolini

18.1. Structure and cells isolated from human term placenta	301
18.1.1. Structure	301
18.1.2. Cells isolated from the human placenta	303
18.2. Cell differentiation.....	304
18.3. Immunological properties	305
18.3.1. Immunogenicity.....	305
18.3.2. Immunomodulation.....	305
18.3.3. Mechanism of action	307
18.4. Potential therapeutic effects: preclinical studies and clinical trials	308
18.4.1. Preclinical studies	308
18.4.2. Clinical trials.....	310
Recommended reading and references	311

■ 19. Clinical applications of mesenchymal stromal cells in stem cell transplantation 313

Roberta Rizzo Diana Campioni Daria Bortolotti Francesco Lanza

19.1. Mesenchymal stromal cells: functional and immunophenotypic characteristics	313
19.2. Immunological functions of MSCs.....	315
19.3. Indoleamine 2,3-dioxygenase (IDO)	316
19.4. The HLA-G antigen.....	317
19.5. Clinical use of MSCs.....	318
19.6. Anti-microbial role of MSCs	319
Recommended reading and references	320

■ 20. Cancer stem cells323

Massimiliano Bonafè Gianluca Storci

20.1. Introduction.....	323
20.2. CSCs: from theory to cellular identification	323
20.3. CSCs: from the primary tumour mass to the <i>in vitro</i> model	326
20.4. CSCs: hijacking of the normal stem cell programs	326
20.5. The role of the epithelial-mesenchymal transition and hypoxia in intra-tumoral heterogeneity	328
20.6. The inflammatory addiction of cancer stem cells	328
20.7. Final perspective	332
Recommended reading and references	332
